

PAY PER U\$E

TROTEC is once again setting new standards

Who is it for?

For anyone who wants to enter the world of laser engraving and cutting with as little financial commitments as possible, especially in the start-up phase.

What is it?

A virtually risk free way to laser engraving and cutting. It's simple – less work less cost. Only pay for your laser when it actually makes money for you.

How does it work?

Purchase the Pay-Per-Use Rayjet Package for just \$9,000 including 10 laser hours to get you started. After that, similar to pre-paid mobile phones recharge the system with laser hours whenever engraving and cutting jobs come along.

What is included in the \$9,000 package?

Everything you need to start laser engraving – **Just Plug & Ray!**

- **Trotec Rayjet Laser, 30W** - The most user friendly laser on the market
- **Trotec "ride-on" Mistral 1000 filter** - A fully integrated filter system (the only one)
- **FREE CorelDraw Suite** - The industry leading graphic software
- **FREE Home Industry Tutorial** - Helping to kick-start your home business
- **FREE laser hours** – earn up to \$2,500 straight away with the included 10 hour package

Is there a cap to recharging?

Absolutely! Depending on the amount of productive money making laser hours the cap can be reached as early as in the first year. Enjoy unlimited laser hours from there.

What do people do with the money they save on the initial investment?

Many of them invest in advertising their extended or new laser capabilities and attract extra business straight away! Those activities range from simple ads in the local paper to sending out samples to prospects.
